

Home Page Image

I prompted the Chat GPT to make me an image of a high ropes course for in the woods and to make it child friendly.

This image was along the right lines of what was wanted by the team but this would not fit on a mobile phone screen, which is what the game is designed for. This image is a good start as it shows what the game is about without fully opening it. To make this work for a phone screen, chat gpt was then prompted with can you fit the image to a phone screen.

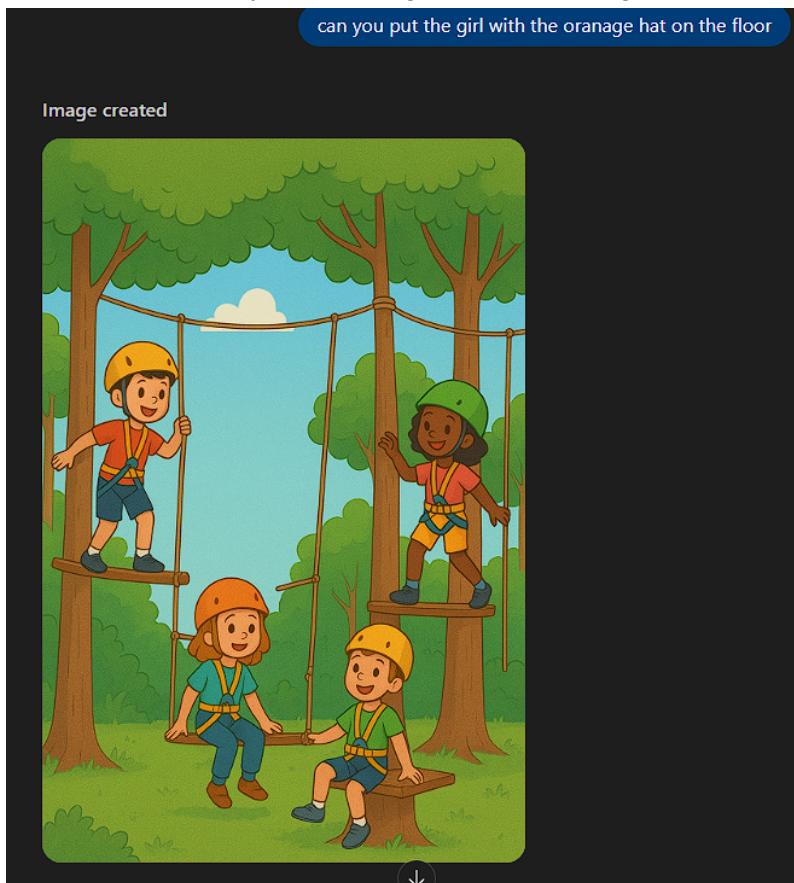

can you do it to fit a phone screen

Image created

This is a step in the right direction as it would suit a phone screen. However there are few things wrong with this image and there is a rope that is not attached to anything and a foot that is hovering. So to fix the issues with the girl in an orange hat. Chat gpt was then

prompted with can you put the girl with the orange hat on the floor.

This image again is on the right track as this image looks more realistic than the one prior. Although there still are some rope that is in the wrong places and this would be an issue and not work for what is needed from the image as the image will be seen as the front of the game so it needs to look professional. So then chat gpt was prompted with can you fix the rope to the right side of the orange hat to make sure that it is connected.

can you fix the rope to the right side of the orange hat to make sure that it is connected

Image created

This image was slightly a step back as it deleted the rope holding up the wood. This would not work as it doesn't make sense and does not look professional enough for what is needed from this point. To make the image work I used the image that was generated before and downloaded it to my phone. Then I used the android AI image editing to make the rope that was sticking out and the rope that disappeared behind her head and I had removed them and fill the image to make it look clean.

AI-generated content

This is the image that android AI helped with and this image is exactly what was needed. This image looks professional and has the ability to fit everything that was needed for the home page. Like the name of the game and buttons that are used by the user to navigate the app.
